

## “Empowering Communities and Connecting Lives”

**Aeneas Internet and Telephone and STEMC have formed a partnership to build and expand a Gigabit fiber network to bring Broadband communications to the region.**

### **Project Details**

With the need for broadband internet services growing at an exponential rate, Southwest Tennessee Electric and Aeneas Internet and Telephone have joined forces to bring this much needed service to more people around West Tennessee! This partnership will allow future expansions of existing Aeneas fiber cities as well as reach the underserved areas of West Tennessee that have no broadband option available to them. The availability of broadband not only allows us to stream video and browse the internet faster, but it can increase economic development, increase home value, and allow possible technological enhancements to come to the region such as telemedicine. Projects are already underway so follow us on social media at <https://www.facebook.com/stemconline> and <https://www.facebook.com/AeneasCom/> to get all the latest news!

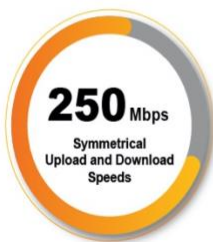

### **Frequently Asked Questions:**

- How can I learn more about this project and partnership? You can visit <http://aeneas.com/stemc> to learn more, see pricing, and even sign up.
- Are there data caps / limitations? No, there will be no caps on how much broadband you use.
